

ABSTRACT OF THE DISCLOSURE

A parameter tuner system, in which the development efficiency of an application program including parameters such as an image and sound is improved, is provided. A program for changing a parameter being stored in a shared memory 31 is provided on a host computer 10, while a program for reflecting the changed parameter to an application program to perform execution thereof is provided on a target machine 40, whereby change of parameters and the executive validation of the application program can easily be conducted.
